

## **Magnetic Whiteboard Wall – Training Centre**

Our ThinkingWall panel system is ideal for creating a large magnetic whiteboard wall and this latest installation is one of the largest we have produced to date.

This magnetic whiteboard wall is part of a series of boards we fitted for a large training centre in the north of England. This ThinkingWall is 12 metres long by 2.6 metres high and although we have produced longer walls we believe this is the largest whiteboard surface area we have ever produced.

The ThinkingWall whiteboard is ideal for collaborative meetings and sessions where a large visual planning space is a key tool. Large groups can get together to quickly and easily sketch or write thoughts and ideas onto the board for discussion.

ThinkingWall is a modular system which allows multiple panels to be fitted together resulting a one continuous writing space with only very fine joining seams. This means we can create a magnetic whiteboard wall at almost any size.

The ThinkingWall panels feature a high quality drywipe and magnetic receptive surface with a sleek frameless finish. All panels and their purpose made mounting frames are bespoke with finishing details matched to enhance your workspace. It delivers the functionality of a traditional whiteboard with a high quality, thoroughly contemporary look and feel.

Further details can be found on our RIBA product selector page and ThinkingWall® can be found in the NBS plus software package.
